Response to Arguments

Applicant's arguments filed July 9, 2008 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Li.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 24 and 26-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Li et al. (US 2007/0086337).

1. Regarding claims 24, Li discloses a multistage classification method of selecting a policy from plural policies (fig. 8) based on plural PDU nibbles (fig. 12; paras. 54-55; note: header sections), the policies being embodied in several hierarchical tables (fig. 15; para. 15, lines 1-9),

Art Unit: 2416

comprising a first table and child tables (para. 16). The method comprises generating from a first nibble a first pointer to a first table of tables that embody a policy (para. 69, lines 4-7; fig. 11, steps 1104 and 1106), comparing the first nibble with each of the criteria and identifying matches (fig. 13), identifying a pointer to a next child table (fig. 13, step 1309 and 1310), and reverting if no matches are found (fig. 13, steps 1312 and 1314).

2. Regarding claim 26, the tables are arranged in criterion groups (figs. 5 and 12; para. 45, lines 1-10).

3. Regarding claim 27, the tables are searched and arranged hierarchically, where searching is performed within a class (fig. 13, steps 1312 and 1314; fig. 15, steps 1518, 1520, 1522 and 1524; fig. 16).

Allowable Subject Matter

Claim 25 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-23 and 28 are allowed.
